By the end of 2014, Agrisud had launched and supported close to 45,000 small farms. These farms are professional and resilient and they help to combat poverty in over 15 countries in the Global South.

We have a two-fold approach - we believe in business and we also believe in agroecology.

Our business approach is based on making use of the market, although not in ideological terms; we do not believe that free trade will work miracles by itself. On the contrary, we know that trade liberalisation worsens inequalities, often dramatically. We believe in the market in its concrete, local and operational manifestation, as there is local demand – i.e. a market – and production capacity for food everywhere. We help harness this production capacity in the form of small agricultural enterprises which are professional enough to grow and deliver the right products, at the right price and the right time to the local market.

We were also right to opt for agroecology. We have been encouraging small farmers to implement environmentally-friendly farming methods for over a decade. We are actively involved in a major global cause - combating land degradation - which is most often caused by uncontrolled deforestation. Agrisud's projects in Haiti, Madagascar and Laos include slope stabilization and tree planting. They help to save land and restore natural heritage.

Our initiatives use reforestation and market gardening – which often utilizes abandoned farmland – and thus contribute to capture greenhouse gases. This contribution has an even greater impact as agroecology methods are systematically used, thus avoiding pollution and the emissions produced by the chemicals-based farming methods used elsewhere.

Agroecology is win-win on every level: it makes for a good diet and health, increases yields, protects soils, and helps to combat climate change.

A range of climate funds recognize its benefits - they fund our initiatives, which include a robust evaluation of the emissions that have been avoided and the CO2 captured. We are close to capturing 3 tonnes of CO2 equivalent per hectare per annum.

2015 is the year of the climate. At its own level, Agrisud is taking part in the global efforts on this major topical issue.

This enables us to stand up for our conviction, namely that developing a smart brand of agroecology, coupled with sustainable reforestation, is a vital weapon in the fight against climate change.

Robert Lion
Chairman
The international agenda is once again making the climate big news, with the climate change talks taking place in Paris. The Paris conference is undoubtedly an opportunity for Agrisud to showcase the ‘climate benefits’ of its grassroots initiatives. Our objective in 2015 is to facilitate the creation of 4,200 family farming Very Small Enterprises (VSE), bringing the total number of VSE launched to 49,000. No fewer than 24,000 tonnes of CO2 will be captured by the three million trees that have already been planted, making a direct contribution to mitigating climate change. Other ‘climate benefits’ of these initiatives include 5,900 people and 30 local organisations being trained in climate change resilient practices and 40 local governments from the Global North and South being given support so that they more effectively incorporate climate issues into their local policies.

Likewise, the initiatives will continue to have a major social impact: 36,800 new people will sustainably leave behind poverty. The same goes for the economic benefits: 302,000 tonnes of food produced by all the VSE and €69.5 million net income generated for these farming families.

2015 will also see the publication of a new Agrisud best practice guide – Management advice for family farming VSE and their umbrella organisations – resulting from a major knowledge building and transfer initiative.

Although the UN decreed 2014 to be the International Year of Family Farming, Agrisud most definitely did not wait until then to support family farming, as family farming has in fact been the cornerstone of our work for 22 years. However, this UN initiative has undoubtedly helped to raise the profile of our work.

Working with their grassroots partners, our teams ran 44 programmes in 18 countries: 3,900 family farming very small enterprises (VSE) were launched, bringing the total number of small businesses set up since 1992 to 44,900. In 2014 alone, these VSE produced 276,000 tonnes of food and generated net income of €64 million for the families involved.

The economic impact is clear to see and the food security of both the farming families and the local markets has been improved. The social impact of these businesses is no less significant: the 44,900 VSE account for 158,800 long-term and sustainable jobs and have enabled 424,000 people to leave behind poverty and become self-sufficient. The environmental impact increases year-on-year, particularly due to the utilization of agroecological methods. These VSE help to reduce the pressure on natural resources and to cut greenhouse gas emissions, with 14,400 tonnes of CO2 being captured.

In order to develop the skills of local organisations, agroecology training courses were delivered in Senegal, Benin, Haiti and Mozambique to 33 new local organisations.

The support provided by our funding partners meant that Agrisud’s consolidated budget was €7.3 million, 82% from public and 18% from private funds. Agrisud once again maintained a balanced budget in 2014.

Just as they did in 2014, and whatever the contexts they face this year, in 2015 our teams will continue to use their expertise to the benefit of vulnerable populations, coupled with the commitment they demonstrate on a daily basis in the field, and that they enthusiastically and energetically reaffirmed at our September 2014 meeting in Frontenac, the birthplace of Agrisud.

Yvonnick Huet
Managing Director
**Agrisud’s Key Data**

**Agrisud Since 1992**

- 44,900 family farming VSE created
- 423 local organizations reinforced
- 158,800 long-term jobs created
- 424,000 people saved from poverty
- 23 countries

**Agrisud in 2014**

- 3,900 family farming VSE created
- 276,000 tons of food *
- 64 millions euros net income *
- 14,400 tons of sequestered carbon *

* Income for 44,900 family farming VSE

**2015 Goals**

- 4,200 new family farming VSE created
- 36,800 new people saved from poverty
- 302,000 tons of food *
- 69.5 millions euros net income *

- 14,400 tons of sequestered carbon by 3 million of trees *
- 5,900 people trained in resilient practices
- 40 south and north organizations supported
- 20 local organizations reinforced

* Results for 49,100 family farming VSE

**Madagascar**

**Holistic forest conservation program (PHCF – Phase II)**

Madagascar has a great biodiversity but its natural capital is threatened by deforestation, about 0.53% per year. 50,000 hectares of its natural forest disappears every year. The aim of the Holistic conservation program (or PHCF in French) is to reduce the rhythm of deforestation. For this purpose it uses two strategies: on one hand, it raises the awareness of local populations on the decentralized management of environment and on the other hand, it promotes activities and alternative techniques rather than slash-and-burn farming and collecting forest resources.

**Expected results on 48 months (2014-2018):** 34 development and local management of agricultural resources plans developed; 600 ha sustainable developed; 1350 accompanied farms in the evolution of their production systems and the development of alternative activities.

**Budget** of €1,230K funded by French Agency for Development (AFD), French Global Environment Facility (FFEM), Air France.

**Project management:** Etc Terra with Agrisud on agro-environmental parts, partnership with WWF.

**Other operations in Madagascar**

- Management of Zambazamba’s watershed’s integrated water resources
- Improving the capacity of civil society organizations to support income-generating activities in rural areas – Madagascar Highlands
- Agro-forestry and farm forestry in Itasy
- Professionalizing agriculture in the Itasy Region

**Operations details on** www.agrisud.org

**Mozambique**

**Fighting against deforestation and the decline of the Miombo forest in Gilé’s national reserve and its suburbs – Zambezia Province**

The slash-and-burn agriculture is threatening natural resources in the surroundings of Gilé’s National Reserve, in Zambezia Province. The project is following the REDD+ strategy which is a sustainable economic and social development for the people leaving nearby. This goal can be achieved through the enhancement of the value and conservation of natural resources thanks to sustainable farming promoting agroecological systems and practices. Thus they have to take into account the development of farming chains and protecting natural resources.

**Expected results on 36 months (2014-2016):** 300 agricultural VSEs implementing agroecological systems and practices in Gilé’s national reserve’s buffer zone. Natural resources protected. 8 Comities managing natural resources strengthened.

**Budget:** €400K funded by FFEM, IGF, Etc Terra, Agrisud and IFAID.

**Project management:** IGF (leader), Agrisud with Etc Terra partnership on the topics of agriculture and community development.

**Mayotte**

**Strengthening ecologically and economically the activities of the Tanafou Yhazi association of MTsaahara**

The Mahoran agriculture suffers from disparities: only a handful of large modern exploitations have access to European aids whereas a large majority of family farms are only surviving. The project is to professionalize an association of women producers through internal governance, agroecological production and agroforestry but also by improving the value-added processing and the marketing.

**Expected results on 36 months (2014-2016):** a strengthened Tanafou Yahazi association, 10 women producers modify their production system and organize a transfer of knowledge and skills to 50 other members of the association. Set up of a processing plant.

**Budget:** €152.7K funded by Ministry of Agriculture, Food and Forest / CASDAR (call for projects for collective mobilization for agroecology).

**Project management:** The Mahoran Agriculture, Fishing and Handcrafts Chamber (CAPAM) and support from Agrisud with partnerships with CAPAM, AMMEFLHORC and AFCIAM.
Agricultural Development and Investment Program in Gabon (PRODIAG)

Agricultural development is one of the foundations of the Gabonese economy. PRODIAG is a pillar in this context of emergence and follows upon IGAD’s (Gabonese Institute for Development) project to support the development of outer-urban farming implemented these last years. The aim is to keep experimenting and spreading adapted and sustainable technical solutions responding to local markets’ needs in Gabon’s nine provinces.

**Expected results:** 1,094 agricultural VSEs supported, promotion of agroecological systems and practices.

**Budget:** €20,000K over 2011-2016, funded by the Gabon State and the French Agency for Development (AFD).

**Project management:** IGAD and support from Agrisud with partnerships with CIRAD and CARBAP.

---

**SAO TOME E PRINCIPE**

Professionalizing organic, fair-trade pepper and spices supply chain

The islands of Sao Tome e Principe have directed their development towards food-crop growing but also the promotion of quality products export (cocoa, coffee and pepper). In this context, the goal is to promote 300 farmers’ sustainable production of quality organic pepper. This production responds to agroecological systems and practices. The purpose of the project is also to set-up a fair supply chain supplying the export and local markets.

**Expected results on 24 months** (2013 - 2014): 300 pepper and spice production VSEs supported, organized export channel.

**Budget:** €110K funded by FIDA – International Fund for Agricultural Development, Agrisud and Hom&Ter.

**Project management:** PAPAFPA - Participative support Program for family farming and small-scale fishing, support from Agrisud and Hom&Ter.

---

**OTHER OPERATIONS IN DR CONGO**

Supporting sustainable development of farming activities and value chains in Luozi, Bas-Congo Province

**Operation details on www.agrisud.org**
**INDONESIA**

**Strengthening local sustainable supply chains of fruits and vegetables in Bali**

In Bali, the touristic sector is always expanding and requiring quality fresh products from local farms. The project has been constructed with Club Med to strengthen the quality, regularity and traceability of local supply chains.

For this purpose, a group of farmers is supported to enhance the value of their production system thanks to agroecological practices.

**Expected results on 24 month** (2014-2016): 10 farmers member of the organization « Bukit Sarining Merta » of the Bukitcatu village are supported.

**Budget:** €521K funded by Club Med.

**Project management:** Agrisud.

---

**LAOS**

**Forestry and agroecology in the mountains of northern Laos – Luang Prabang Province**

After a first successful operation between 2009 and 2012, the goal of this project is to keep fighting against the poverty of people living in the mountains in northern Laos. For that purpose, the natural resources have to be rehabilitated, safeguarded and valued (water, soil, biodiversity).

The project will also adapt to climate change and mitigate its consequences (agricultural systems' resilience, reduction of greenhouse gas emission and carbon sequestration).

**Expected results on 48 months** (2014-2018): 600 farming families supported in 20 villages of the Viengkham district, among the poorest in the country, 1800 ha of restored forests; 8 water supply systems managed and their impluvium preserved; 10 participatory land use plans made.

**Budget:** €880K funded by French Development Agency (AFD), France Volontaires, Fondation Ensemble, Agrisud and partners.

**Project management:** Agrisud with partnership with Etc Terra, SAEDA and PAFO - Provincial Agriculture & Forestry Office Luang Prabang.

---

**CAMBODIA**

**Diversification of peri-urban agriculture in Siem Reap and fight against malnutrition**

Siem Reap is the first touristic destination in Cambodia thanks to its famous Angkor temples. The urban and touristic growth came with a strong demand for fresh products in local markets. However this demand is far from being satisfied by local producers. In the city's outskirts, the survival of farms is threatened.

The project’s goal is to improve living conditions of 820 small peri-urban farmers by working on:

- The intensification and diversification of the production,
- Promoting and enhancing the value of local products,
- Strengthening producer organizations and promoting agroecology.

**Expected results:** 820 farming VSE assisted, 1 spiruline production unit created.

**Budget:** €1,125K (2011 and 2015) funded by Hauts-de-Seine General Council (€922K), Agrisud and partners.

**Project management:** Agrisud with partnership with Srer Khmer.

---

**INDIA**

**Strengthening traditional agricultural activities through the farming of spices in the Dehra Dun district – North of India**

The goal of the Masraspatti project is to improve the life conditions of 140 poor farmer families, on a long-term basis, in 8 villages of Panchayat.

Agrisud and its local partner HARC, assist those families in the development of the cultivation and processing of spice plants like ginger, turmeric, pepper or coriander.

**Expected results on 24 months** (2014 - 2016): support 140 very small farming enterprises on 8 villages and one distillation workshop.

**Budget:** €25K funded by Agrisud and HARC.

**Project management:** Agrisud in partnership with HARC.
Sustainably enhancing the performances of the farming sector – Ghassate municipality

The family agriculture in Ghassate Municipality has a double vocation: one part of the production is used by households, the other is sold on local markets. The physical and climatic contexts are difficult. Access to productive natural resources (water and soil) is limited, the agrobiodiversity is threatened and there is a strong pressure on health. Therefore, the traditional methods are challenged making it hard for populations to maintain or adapt their performances. The goal of the project is to value the farming potential of these people to ensure them sustainable income and food security.

Budget: €196K funded by MASEN.

Project management: Agrisud in partnerships with Norsys Foundation and ORMVAO (Office Régional de Mise en Valeur Agricole de Ouarzazate).

OTHER OPERATIONS IN MOROCCO

Tamount Project in Southern Morocco: Professional organization for sustainable farming

Professionalizing fruit farming and production valuation, Igran N’Asni, Al Haouz Province, phase III

Operations details on www.agrisud.org

BENIN – IVORY COAST

Enhancing municipal know-how in developing insalubrious areas in Abidjan and Cotonou

Cotonou and Abidjan suffer from unhealthy intra-urban areas and are having trouble developing sustainably. Therefore, the goal is to enhance the municipal teams’ and their partners’ know-how on urban planning so they can apply it to two pilot locations in each city.

The methods and tools used are capitalized and transferred to other municipal teams in Benin, Ivory Coast and the sub-region.

Expected results on 36 months (2012-2015): Municipal teams from Cotonou and Abidjan are trained and 3 pilot sites are developed and enhanced. Methods and tools are capitalized and disseminated.

Budget: €1,200K funded by European Union, Paris City Authority, France Volontaires and IFAID.

Project management: Paris City Authority with support from Agrisud, with partnership with Cotonou City, District of Abidjan, UVICOCI, The Local Authorities’ University of the Ivory Coast, France Volontaires and IFAID.
HAITI

Sustainable management of Limbé’s watershed, and measuring the environmental impact of farming activities – North Haiti (Pad Nord)

In a context of strong physical degradation and increasing poverty, the goal of this project is to manage and to valorize, on a long-term basis, Limbé’s watershed. It is important to take into account the development of farming sectors and the protection of natural resources (soil, water and biodiversity). Agroecological practices implemented by the families and organizations ensure performance to technical, economic and environmental plans.

Expected results on 36 months (2013-2016): support 700 very small farming enterprises and evaluate the carbon footprint, 4 priority communal development plans and 16 local development plans developed.

Budget: €1.254K funded by French Development Agency (50%), Aquitaine’s Regional Council (25%), ESFI and others.

Project management: Agrisud in partnership with GRADIMIRH - Groupe de Recherche-Action pour le Développement Intégré du Milieu Rural Haitien, Etc terra, Haiti’s State University – agronomy’s Faculty.

OTHER OPERATIONS IN HAITI

Project for improvement and devlopment of Peltan water source (PAD Nord framework)

Boosting the local economy by reinforcing the manioc and groundnut value chains in Limonade and Fort-Liberté communes (Nord/Nord-East axis)

Agroecological practices learning cycle (Pad Nord proect)

Operations details on www.agrisud.org

FRANCE

The « Medoc Hive » Project

The project is involved in the construction of Medoc territorial food system, to meet local food demand while contributing to the local economy and preserving natural resources. The Medoc Hive both test and incubator space-agricultural businesses, promotes the installation of gardeners in short circuits.

Expected results: implementation of a business incubator, 3 promoting actors and 1 master farmer.

Budget: €140K between 2014 and 2015 funded by the “Pays Médoc”, Aquitaine’s Regional Council, Gironde’s General Council, CFPPA, France Fundation, Phitrist Fundation.

Project management: Agrisud in partnerships with local promoting actors.

Boosting local food supply from Seropedica, Rio State

Since 2010, the project aims to develop and professionalize the local quality food supply from Seropédica group, and promote trade relations with Club Med village.

Expected results over 60 months (2010-2015): 9 agricultural VSEs and 1 profesionalized group supported, 1 supply chain organized with Club Med village.

Budget: €68K funded by Club Med.

Project management: Agrisud in partnership with Seropedica group.

Haiti Boosting the local economy by reinforcing the manioc and groundnut value chains in Limonade and Fort-Liberté communes (Nord/Nord-East axis)

Operations details on www.agrisud.org
HAITI

Project to support the rural community of Lombard (Limbe town) for improved drinking water coverage (in PAD Nord framework)

Expected results on 9 months (2015-2016): A adduction water system rehabilitated and managed by a committee that allows 400 households with sustainable access to safe drinking water; 16 acres of landscaped hillside.

Budget: €135K funded by French Development Agency (AFD), Région Aquitaine.

Project management: Agrisud in partnerships with GRADIMIRH.

OTHER OPERATIONS IN HAITI

Boosting the local economy by strengthening growth areas, north - northeast of the northern department

Operation details on www.agrisud.org

IVORY COAST

Promotion of sustainable urban and periurban agriculture in 5 pilot towns in Abidjan

Historically, Abidjan’s urban and periurban agriculture has always been dynamic. However, it is facing some challenges. The low soil fertility, the depletion and pollution of water resources and the rise of parasites pressure are jeopardizing farming activities that could create income for thousands of families.

This pilot project’s goal is to reinforce the agroecological skills of 25 farming technicians from 15 Ivory professional organizations and NGOs. It supports the creation of a network uniting 90 pilot market gardeners.

They will be able to spread practices and systems to 500 other farmers in Abidjan’s 10 different production sites in 5 towns.

Expected results on 24 months (2014-2015): 25 participants from 15 organizations (NGOs and PO) trained in good agroecological practices, monitoring system and 500 associate market gardeners.

Budget: €68K funded by the French Ministry of Foreign Affairs - FSD, Abidjan’s autonomous district, the Local Authorities University and Agrisud.

Project management: Local Authorities University and support from Agrisud in partnerships with local NGOs and Ivorian farmer organizations.

MADAGASCAR

Professionalization of north Antananarivo periurban agricultural sectors – PROFAPAN

Budget: €1,739K funded by European Union, Champagnes Ardennes Region, Agrisud.

Project management: Agrisud in partnership with AIM, CIRAD and MPE.

OTHER OPERATIONS IN MADAGASCAR

Integrated management of water resources watersheds on Haute-Matsiatra region

Operation details on www.agrisud.org
Sustainable strengthening and development of farming activities in Marrakech’s palm grove

As part of the Safeguard and Development Programme of the Palmerasie of Marrakech, the Mohammed VI Foundation for the Protection of the Environment decided to work for the improvement of living conditions of the population.

The idea is to promote a network of small sustainable economic activities to benefit people who implement them (income generation), and also restored the natural environment (Palmeraie).

Agriculture is undoubtedly the sector that can best articulate these beneficial relationship men / territories: the people engaged in agricultural activities that protect the Palmeraie, and Palmeraie (canopy) protects agricultural activities.

Expected results on 24 months (2015-2017): 50 pilot family farms supported in an enhanced management of farming activities for a greater performance of agro-environmental, economic and social plans.

Budget: €863K funded by Mohammed VI Foundation for Environmental Protection, OCP Foundation, Norsys Foundation, Green Maroc Plan, Agrisud and beneficiaries contributions.

Project management: Agrisud and the Norsys Foundation in partnerships with Mohammed VI Foundation.

OTHER OPERATIONS IN MOROCCO

INES project (entrepreneurial Agricultural initiatives), town Ghassate

Securing fruit production by access irrigation water on dry period, cooperative Tifawine – Ingran N’Asni

Operations details on www.agrisud.org

Support for CEPIBA for the development of quality organic pepper

Supporting sustainable development of household activities in the coastal zones of Muanda, Bas Congo province

Expected results on 12 months (2015-2016): An organised circuit for marketing products from fishing. 160 agricultural VSEs supported.

Budget: €150K funded by Chevron and Agrisud.

Project management: Agrisud in partnerships with CAPM - Coopérateive des Associations des Pêcheurs de Muanda.

Improving feeding practices - Basse Casamance

Agrisud and its local partner, the Agricultural and Social Promotion Centre (CPAS) involved in this area since 2009. They accompany women «gardens» in the development of their fruit and vegetable business. But in this area, the problem of malnutrition arises qualitative and seasonally.

In this context, the project plans to support families in changing dietary practices: improved knowledge of the basic rules for a healthy and balanced diet, as well as transfer of technical preparation, processing and preservation of food products.

Expected results on 12 months (2015-2016): 180 families mastering the basic knowledge in nutrition and hygiene, changing their daily eating habits including food of the child, being able to transform and preserve surplus food and enjoying a varied diet throughout the year.

Budget: €23,2K funded by Bel Foundation, Agrisud and CPAS.

Project management: Agrisud with CPAS partnership.
Agrisud has a constant focus on boosting the action capacities of NGOs, organizations, professional groups, and also those of its own projects’ teams. Transfers of skills are made via learning cycles.

Skill Transfer to Local Organizations

**Learning Cycle**

**Design and implementation of VSE projects**

This cycle is based on a transfer of skills and know-how in implementing sustainable development projects focusing on very small enterprises (VSE).

In particular, it enhances the organizations’ ability to:

- perform a diagnosis and write up a proposal for intervention;
- implement a support project;
- take part in evaluating, capitalizing on and publicizing the achievements of the projects.

**Promoting agroecological practices**

Based on the “Agroecology in Practice” guide (Agrisud, 2010), this course helps participants learn these practices.

It is based on transferring methods and tools to:

- understand agroecology and its economic, social and environmental dimensions;
- understand the sustainable management of a farming system;
- analyze the context of operation and identify the appropriate agroecological practices;
- be able to spread these practices.

**Sessions 2014**

4 sessions of the learning cycle promoting agroecological practices

- In Senegal, from 5th to 12th of June in Diourbel, 15 participants from 7 projects and/or structures: Revitalization of the vegetable production in Diourbel region, Diourbel CIH, ANCAR Diourbel, Bamby SDDR, FEUGAPAB, FPN and Ndem.
- In Haiti, from 19th to 26th November in Cap Haitien, 21 participants from 9 projects and/or structures: PAD Nord (Agrisud project in partnership with Gradinm and Etc Terra), RECOCARNO, CLES, SPEBP, MPP, OPADI, AFB2, MARNDP through agricultural town offices from Carice, Ferrié, Acul du Nord and Marmelade, UCNH.
- In Mozambique, from 3rd to 10th December in Mocubela, 17 participants from 5 projects and/or structures: Agrisud, COSV, Incaju, Radeza and SDAE.

Thanks to the support of the French Development Agency (AFD), the FFEM, Aquitaine Region, The Pain pour le Prochain, the SECAAR and the participation of the organizations.
